Brief Background:

I am an associate professor of audiology and auditory neuroscience at the ENT and Head & Neck Research Center and department at the Iran University of Medical Sciences (IUMS), Tehran. I completed a bachelor's degree in audiology from IUMS subsequently I have earned a master's degree in clinical audiology from IUMS and a PhD degree in auditory neuroscience from Hannover Medical School, Hannover, Germany. I have also completed a postdoc fellow research at neurotology department of Hannover Medical School and IUMS jointly. My research interest is on cognitive neuroscience of human auditory processing and mechanisms involved in tinnitus. I have been investigating brain processing using electroencephalography, electrophysiology, fMRI, and other brain mapping techniques. My actual interest is investigating neural basis of tinnitus, with the main objective of studying novel approaches the functional and structural neural changes that are associated with tinnitus perception.
